

MSc - Data Mining

Topic 01 : Module Overview

Lecture 02 : Pre-Start Lab - Feedback

Dr Kieran Murphy

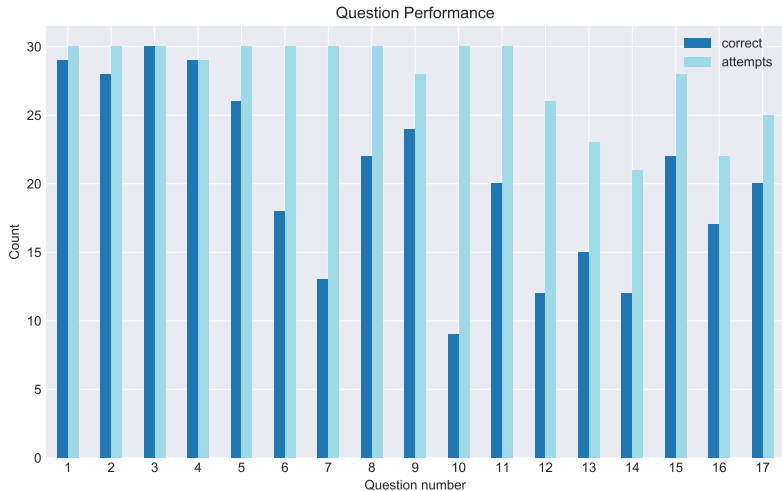

Department of Computing and Mathematics, WIT.
(kmurphy@wit.ie)

Spring Semester, 2021

Outline

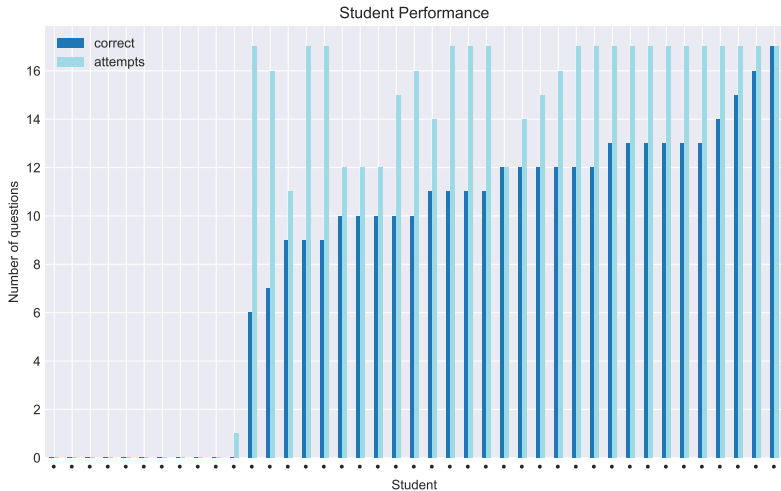

- Question and student performance

Question Performance

- ✗ Q10, Q12 and Q14 — typical issues were not entering percentage as a decimal, and incorrect rounding — this is easy to fix, so hopefully will be less of an issue going forward.
- Weakest questions were the latter questions that involved a mixture of filtering and grouping — will cover these questions.
- I gave you an incorrect formula for identifying outliers in Q6, sorry about this.

Student Performance

- ✓ Most attempted all questions — this is nearly always a good idea, even with negative marking.
- ✓ Half of the students got at least half of the questions correct.
- ✓ Overall, the performance is hit high mark or better, 8 more higher than minimal.
- ✗ 10 did not attempt and 3 got less than low mark
